                                                                           Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 19, 2002 this sequence version replaced gi:23912578.
On Nov 19, 2002 this sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (19-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 258815)

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CCATCCTATCTGCTCCCGGGAGCACTGGTGTTCTCAGACTTCTTG 110579

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein AAY85617. The Ngn3 gene is located at chromosome position 10q22.1-22.2. The invention relates to the human Ngn3 nucleotide and protein sequences, and includes an antibody recognising the Ngn3 protein. Also included in the invention is a method for identifying an islet cell precursor, the method involves analysing a cell for the expression of the Ngn3 gene product, where detection of the product is indicative of an islet cell precursor. The Ngn3 DNA sequence is useful as a diagnostic reagent for detecting (in a subject) a predisposition to a defect in pancreatic islet cell function or formation associated with a defect in Ngn3 activity. The Ngn3 protein is useful for identifying beta-cell precursor cells expressing Ngn3, and to alter cellular differentiation in culture in vivo to produce new beta-cells to treat patients with diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5340

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3501
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3561
```

The invention relates to a method for producing a mammalian islet cell. The method comprising introducing into a mammalian cell a nucleic acid molecule encoding an islet transcription factor for expression of the islet transcription factor in the cell and for production of islet cell phenotype in the cell. The islet transcription factor is a neuroendocrine basic helix-loop-helix (bHLH) transcription factor. The method is useful for treating type 2 diabetes mellitus and for replacing beta cells lost

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a basic helix-loop-helix (BHLH) type protein, designated RELAX (Rat Embryonic Longitudinal Axis) protein. The protein is used to control and participate in gene expression, by acting as transcriptional activator, strictly dependent on the presence of an intact E box (CANNTG), particularly for targeting expression of proteins to the central nervous system (CNS). The nucleic acid sequence can be used to treat nervous system disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Basic helix-loop-helix polypeptide and related nucleic transcriptional activity, for targeting expression of greentral nervous system and treatment of nervous disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses a method for inducing non-neuronal cells (NNC) to differentiate into neurons and for NNCs to express a neuronal subtype specific marker. Transformed host cells are used as sources of neuronal and other growth factors; in culture for screening compounds that modulate neural differentiation or as sources of recombinantly produced neurogenins and phox2a proteins for use in transplantation. The cells also have a variety of in vivo uses, e.g. for transplantation at sites of neuronal dysfunction e.g. patients with hearing or vision loss due to optical or auditory nerve damage, brain or spinal cord injuries, and neurodegenerative discaders e.g. Alzheimer's disease. The present sequence encodes murine neurogenin-3 (NGN-3), a transcription factor. NNCs differentiate into neurons through the recombinant expression of a transcription factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 804
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transcription factor that induces a core program of neurogenesis. expression of murine NGN3 can elicit expression of at least some r phenotypic markers even in NNCs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Inducing non-neuronal cells to differentiate into neurons and for non-neuronal cells to express a neuronal subtype-specific marker, comprising contacting the non-neuronal cells with a vector containeurogenin nucleic acid -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CDS
